

Image Point Grabber

Image Point Grabber allows you to capture background application screen or browse an image, set origin point on image and on click get set of points on image w.r.t origin.

CaptureBackApplication Image – Allows you to take the capture of running background application.

Save Image – Allows you to save the capture image.

Browse Image – Insert image from a file.

Set Origin – With this radio button checked, clicking on image will set that point as point of origin. The point of origin can also be set through textboxes provided at right of screen labelled Origin.

Note: Every time you set origin you “should” get a message box with origin point to indicate origin is set properly

Coordinate Grabber – With this radio button checked, clicking on image will start recording the coordinates (w.r.t origin point) in the text area. The coordinates are in (x,y),(x,y)... format. You have undo, redo, clear, copy buttons for operation on text area.

Note: Drag and select on image will record the rectangle path {(left,top), (right, top), (right, bottom), (left, bottom) format} in text area.

Zoom control at bottom right of the screen zooms the area under cursor on image to help select point more precisely.
